

Requirement Analysis

EduGenie – AI-Powered Learning Assistant

Customer Journey Map

A student's journey through EduGenie:

Step	Action	Description
1	Open	Launch the EduGenie web application.
2	Input	Enter a question, topic or text.
3	Select	Choose the required learning feature.
4	Process	FastAPI sends a tailored request to Gemini.
5	Result	AI response is formatted and shown to the student.

Pain Points / Opportunities

To be added by the team.

Solution Requirements

Functional Requirements

- Accept a question, topic or text from the student.
- Generate academic answers and concept explanations.
- Generate a 3-question multiple-choice quiz.
- Summarize long study material into bullet points.
- Generate a structured learning path based on topic and level.

Target Users

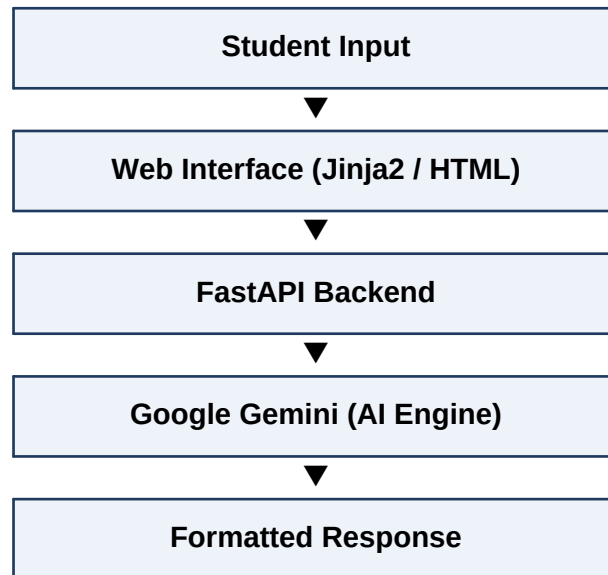

- College and university students
- Self-learners
- Students preparing for exams

Non-Functional Requirements

To be added by the team.

Data Flow Diagram

Flow of data from the student to the AI engine and back:

The student's question, topic or text enters through the web interface; FastAPI builds a tailored prompt for the selected feature and sends it to Google Gemini; the response is formatted and returned to the student.
